SUMMARY

I am a **Gloucester** based **Senior Web Developer** with over **10 years of hands-on experience** in a range of development roles across the industry, both **on-site** and **remote**. I lean towards the **Front-end** side of development, but I am more than comfortable working on complex **Back-end** tasks, too. This makes me a flexible team member who can see the full picture when tackling projects and collaborating with other departments.

I have worked with teams of all sizes, and I am comfortable collaborating across departments to ensure projects move forward smoothly. I have led small teams myself, and understand how to support others, keep projects organised, and help the team stay focused.

I am comfortable working under pressure, especially in startups and fast-growing companies where things change quickly.

TECHNICAL SKILLS

Programming Languages

JavaScript TypeScript Python SQL PHP CSS/SCSS HTML

Key Skills

React Django Next.js Magento Prestashop WordPress Git/Github Docker Tailwind

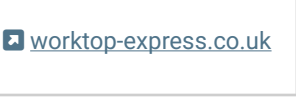

Bootstrap AWS Claude Code Photoshop Figma Responsive Design Web Optimisation

Team Management CI/CD Graphic Design API Integration Code Review Agile/Scrum

CLI/SSH UI/UX Design PostgreSQL ORM Agentic AI Linux Restful APIs

SEO Accessibility Unit Testing

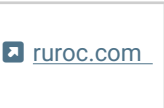

WORK HISTORY

	Direct Online Services (<i>Worktop Express</i>), Gloucester <i>Senior Web Developer, Front-End Web Developer - 2020/25</i>	
--	--	--

I was initially hired as a temporary in-house developer at DOS but was quickly offered a full-time remote position due to the strength of my early contributions. One of my first major tasks was to overhaul the company's legacy checkout process, significantly improving both performance and user experience.

Although my title was initially **Front-end Web Developer**, my role evolved into a more **Full-stack** position. I was promoted to **Senior Web Developer** and spent much of my time working on a bespoke E-commerce platform, primarily using **Python**, **Django** and **JavaScript**. I built payment gateways with 3DSecure V2 validation, automated reward schemes for B2B customers, real-time product filtering systems and many other key features over the years.

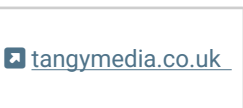

Over this time, I also led the Web Development team and liaised directly with the E-Commerce and marketing teams to ensure projects stayed on track.

	Ruroc, Gloucester <i>Head of Web Development, Web Development Manager - 2014/19</i>	
--	---	---

After leaving University, I started working for a local E-Commerce business that manufactured and sold Action Sports and Motorcycle Helmets online. I initially started as a **Web Development Manager** and was later promoted to **Head of Web Development**.

Before leaving the company, I managed two other developers and oversaw all Front-end and Back-end projects across their various E-Commerce platforms, as well as developing many core features and websites, myself.

When I initially joined, I was the first employee. As a result, my job role was very broad. As well as my main role as a developer, I was responsible for all of the **Graphic Design** work, **IT Support**, as well as numerous other responsibilities too. Because of that, I was able to gain quite a varied and versatile skill set over my time there.

	Tangy Media, Stroud <i>WordPress Developer - 2012/13</i>	
--	--	---

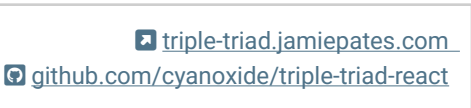

In 2012, as part of my University Placement, I had the opportunity to work as a **Web Designer** and **Developer** for a local web agency.

I consider it to be one of the most valuable aspects of my university course. Most of my time working there was spent building **WordPress** websites for clients, and modifying existing **PHP** modules, and add-ons to meet the needs of the client.

EDUCATION

	B.Sc Institute of Digital Art & Technology (iDAT) <i>University of Plymouth – 2010/14</i>		BTEC ICT for Practitioners, Web Development & Design <i>Gloucestershire College – 2007/10</i>
--	---	---	---

PERSONAL PROJECTS

	Triple Triad React <i>React & Typescript Browser-based Card Game – 2025</i>	
--	---	--

Early in 2025, I wanted a reason to brush up on modern **JavaScript** practices, as I had spent most of my time in recent years working with **Python**. The project in question that I decided on was an authentic recreation of a card game from an old PlayStation 1 game called Triple Triad. I initially just wanted to build a simplified proof of concept, but I ended up building the entire game with all of the cards, rules, and trading mechanics that were present in the original game.

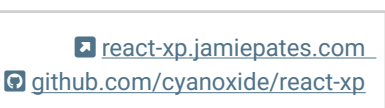

A key goal was to make it look and feel as much like the original as possible. As a result, I dedicated significant time to recreating the images, fonts and animations, with the intent of making it as authentic as possible to the original source material.

	Final Fantasy 7 Menu <i>React & TypeScript Portfolio – 2025</i>	
--	---	--

After building my Triple Triad game, I wanted to try recreating the entire menu system from Final Fantasy 7, as authentically as possible, using **React** and **Typescript**.

I decided early on that I wanted to use this project as a sandbox to explore **TanStack Query (React Query)**, **FastAPI** and **PostgreSQL**.

I recreated many of the features from the game with matching animations and sounds, my favourites of which are the background colour picker in the Config menu and the dynamic health and MP bars that can be depleted by interacting with the player portrait.

	React XP <i>React & TypeScript Recreation of Windows XP – 2026</i>	
--	--	--

I am currently working on building a semi-authentic recreation of Windows XP using **React**. The project focuses on accurately reproducing UI behaviour, interactions, and system workflows to closely mirror the original operating system.

As with many of my projects, I place a strong emphasis on authenticity. I spend a great deal of time focusing on small details that compound to make the final project better overall.

A key focus of this project is managing application state in a clear and reliable way. It handles things like managing windows, navigation history, running applications, and many other user interactions, all of which need to work together smoothly. The structure of the project is also built to make it easy to add new features and applications over time.
